DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-27 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims contain the "phrase A/D converter " which is incorrect. There is no analog to digital conversion in this circuit. It should read an AC/DC converter or rectifier circuit.

Specification

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The same problem as described in the 112 issue.

Allowable Subject Matter

4. Claims 1 and 15 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
5. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art alone or in combination discloses "a bulk circuit, having a bulk input terminal, a first bulk output terminal and a second bulk output terminal,

Art Unit: 2838

wherein the bulk input terminal electrically couples to the first rectification output terminal for receiving the rectification output signal, and a bulk signal is generated from the first bulk output terminal after the rectification output signal is processed by the bulk circuit, a half-bridge circuit, having a first half-bridge input terminal, a second half-bridge input terminal and a half-bridge output terminal, wherein the first half-bridge input terminal electrically couples to the first bulk output terminal, and the second half-bridge input terminal electrically couples to the second rectification output terminal, a first switching diode, wherein an anode electrode of the first switching diode electrically couples to the second half-bridge input terminal, and a cathode electrode of the first switching diode electrically couples to the second bulk output terminal, and a second switching diode, wherein an anode electrode of the second switching diode electrically couples to the second bulk output terminal, and a cathode electrode of the second switching diode electrically couples to the half-bridge output terminal, a driving module, electrically coupling to the second bulk output terminal and the half-bridge output terminal of the switching module for blocking a DC bias output from the half-bridge output terminal, and generating a driving signal after the signal obtained from blocking the DC bias is resonated.”
